

## New YSC Kits Fuse Art with Science

### Science-Art Fusion is a new line of STEAM kits on the way from the award-winning Young Scientists Club.

Launching in Q1 2016, the series of six kits (Bubbles, Rainbows, Crystals, Explosions, and Sculptures) introduces and promotes knowledge and skills in science, technology, engineering, art and math.

Created for kids, five and over, each themed kit in YSC's new line includes all the components and materials, as well as a 61 x 61-cm (24 x 24-in.) poster with instructions, needed for completing 10 different experiments that fuse the fields of art and science.

For example, in the Science-Art Fusion Crystals Kit (pictured), activities include making a beautiful crystal flower, along with experiments to construct a crystal mobile, develop sun-catcher crystals, create sponge crystals and more.

Youngsters are encouraged to take a photo as each experiment is completed and then tape the image to the poster. When completed, kids will be able to visit the Young Scientists' Fusion Art Gallery online and post their favourite science-art moments.
