STEM Toys So Much Fun Your Child Won't Realize How Much She's Learning

The benefits of STEM skills, those focusing on science, technology, engineering, and math, are numerous and well documented. This holiday season, take the opportunity to give the children in your life toys that will foster these skills and set them up for success.

Best of all? Toys that focus on STEM skills are among the most fun out there so you don't need to worry about your child missing out the latest huge plastic toy.

Below are some of the best.

Circuit Scribe: [Circuit Scribe](#) is a cool device that actually lets you draw your own circuits. Each kit comes with a steel sheet that brings your child's project, designed with conductive ink pen, sweet magnetic modules, and plain old printer paper, to life. Various options are available, including the [mini-kit](#) for under \$10.00.
