

Best Educational Toys & Games for 7- to 10-Year-Olds

Let's Experiment!

Elementary school kids are natural science whizzes. These are the years of pop-bottle chemistry experiments, baking soda volcanos and Lego Rube Goldberg machines. Encourage hands-on fun and experimentation with kits to inspire kids' natural curiosity. These toys will open up the worlds of chemistry, physics and more to the 7-to-10 set.

Chemistry Lab

Every kid needs a chemistry kit, and the Magic [School](#) Bus Chemistry Lab is just the ticket for the elementary-school set. The kit contains instructions and ingredients for a few dozen experiments, from testing pH with litmus paper to making slime and creating an exploding volcano. (Parents will have to provide some basic kitchen ingredients like cornstarch, salt, vinegar and ice.)

(Recommended ages: 5 to 12)

Price: \$39.99
