

## Dean creating using Geosmart Magnetic toys

This is our second round reviewing the awesome [Geosmart](#) toys. Why? Cause my lil Dean (3rd child) is absolutely obsessed. Not gonna lie, i love that he is partial to the "smart" toys on the market. Sounds pretentious, i know. But seriously, his older bros are so busy gaming that it's a breath of fresh air to see lil Dean use his imagination and brain to build spectacular structures using only Geosmart magnetic pieces.

To refresh, for my new readers, Geosmart (the future of geomagnetic play) is a magnetic construction toy suitable for children from 5 years old. Each piece contains magnets that are protected by a double safety system.

"A stainless steel cap covering the strong magnets is locked onto an ABS core, which is covered by a double high quality polycarbonate housing. This new, patented stainless steel magnet locking system makes GeoSmart a safer and stronger toy, offers a long lifetime and is easy to clean.

### Geosmart offers 6 different Geoshapes in 9 bright colours

By using squares, triangles, rectangles, diamonds, isosceles triangles and trapezoids kids can create endless combinations, whatever their imagination tells them. Just use the 6 different shapes or combine them with some unique pieces like wheels, lights or a remote control which strongly increase the play value."

### Some of the special elements GeoSmart offers are:

- Spinner: add motion to a simple construction. The spinner easily clicks onto every square piece.
- Wheels: use your imagination and build cars with 4 wheels or 6 wheels
- Tracks: build trucks with tracks!
- Train connectors: build trailers you can easily connect to your vehicle and drive it around.
- LED-Lights: light up your construction with one of the 6 LED colors. The panels easily click onto the squares.
- Remote Control: drive around with your vehicle or make your construction spin automatically.

[GeoSmart](#) is such a cool invention. Dean's hope is that he'll acquire the entire collection. My hope is that more preschools and school in general would supply these for students. They should each have a stash for when there is down time or "rainy day" recess days. My older kids ( 6,8) will join with Dean in the fun too. Makes me heart so happy when I see this.

So, when you have a birthday party to attend to, hop on over to [Amazon](#) (get that free shipping girl), and add Geosmart to that birthday list. Makes such a great gift because it's a toy that keeps giving and giving.
