

## Hurdle the Robot from The Young Scientists Club

When it comes to finding the toys to keep my kids engaged with that are both fun and educational, I find that seeking out those toys that are geared towards STEM and robotics. For this, I like to turn towards the companies that we have enjoyed in the past and one such company is The Young Scientists Club. So when we were sent the robotic kit, Hurdle the Robot to review, I was excited to share it with my kids!

With this kit, I found that it would be perfect for my third grader who enjoys everything that comes with STEM learning! I say that because with this fun kit, my son and his friends can build a real working robot that helps to introduce them to the basics of robotics with a fun toy.

The kit comes with the motor and gears, the computer module along with a very detailed instruction manual that allows my son to get the step by step instructions needed so that he and his friends can put together their Hurdle the Robot correctly. Then once Hurdle is put together, they can then watch as their robot moves around and play with it! Making Hurdle the Robot along with the other robotics kits from The Young Scientists Club a great choice to get the kids when it comes to finding those STEM toys that encourage robotic learning and fun!
